

# Cloud Operations Manager & Server Lead (m/f/d)

Full time | in Bad Säckingen or Work from Home

**We are looking for experienced and proactive cloud operations manager in Bad Säckingen or Work from Home**

Become part of an agile team of experts and work with a high degree of personal responsibility in a unique family environment for leading international companies in the process industry. More than 40,000 users around the globe use our Shiftconnector® solution in the cloud or on-premise to improve communication and documentation in production operations.

## Your chance

Every employee plays an important role in the growth and success story of eschbach. Become part of an established and at the same time visionary company with start-up character:

- Cooperation in an agile and ambitious team
- Pleasant working atmosphere
- Intensive onboarding in close cooperation with team and team leader
- High level of personal responsibility and cooperation based on partnership
- Diverse opportunities for further development and training
- The freedom to make a difference with responsibility and commitment
- A first-class and ergonomic working environment, height-adjustable desks, latest hardware, air-conditioned offices with roof terrace, free employee parking
- Coffee, water, fruit and lunch allowance included
- Virtual Coffee Breaks
- Relocation support for the move to the Bad Säckingen region / Southern Germany

## Your tasks

- Operational responsibility for our Microsoft-based Shiftconnector® Cloud SaaS platform
- Conception and further development of the system architecture, expansion of high availability incl. building failover clusters
- Monitoring and ensuring availability of our cloud and on-premise customer implementations
- Solution specification and configuration of interfaces for the integration of Shiftconnector® into the system landscape of our customers, for example SAP® PM or OSISoft® PI
- Performing updates and maintenance, including updates of Shiftconnector®-customer instances
- Incident response, containment and solution of technical issues in our Cloud SaaS platform as well as our on-premise customer implementations in collaboration with our software development
- Design and further development of solutions for deployment and update automation

- Introduction of new technologies and projects in the area of DevOps and application management for our cloud and on-premise solutions
- Rollouts of new models and performance of complex update projects

## Your profile

- Completed vocational training or studies in IT, alternatively comparable knowledge from a similar employment
- At least three years professional experience IT-administration / system engineering
- Entrepreneurial drive and a proactive way of working
- Good knowledge of web application administration and server operating systems, especially MS Windows Server, IIS and SQL
- Excellent English and German communication skills
- First experiences in web development are of advantage, e.g. SQL, C#.NET und HTML/JS and PowerShell

**Help creating our future and become part of the eschbach family.  
Ready for the challenge? Apply now!**
