SHIFTCONNECTOR® GO

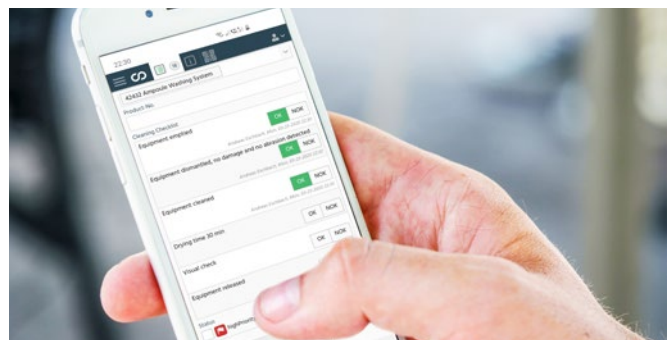

Plant Communication Anywhere – Anytime

Collaborate better. Save time. Access seamless communications.

Shiftconnector® GO connects field operators with workers in the control room and maintenance. Field activities can be easily communicated via a secure mobile app both on- and offline.

Key Benefits:

- **Real-Time Reporting**
Field operators record activities in real-time, allowing the control room to receive immediate updates on plant status. This helps to identify potential safety hazards or plant issues before they become a more serious problem.
- **Increased Safety**
Report incidents, such as spills or leaks, on the go and notify the control room or maintenance for immediate action. Observations and photos get directly into shift communication. This helps prevent accidents and ensures a safer working environment.
- **Centralized Data**
Shift teams store inspection data in a centralized database. One single source of truth makes it easier to track plant performance, and identify maintenance needs.
- **Improved Efficiency**
Realize significant time savings for control room staff as well as operators. Field workers can identify locations and equipment by scanning QR codes. They access checklists, instructions and data sheets on the go.
